

**This didn't have
to happen ...**

Without fire sprinklers, HIGH-RISE = HIGH RISK.

Is your building protected?

A fire in an apartment or condo that isn't protected with fire sprinklers can turn deadly in just two minutes. That's because today's furnishings are made from synthetic materials, which burn fast and produce thick, toxic smoke.

Smoke alarms alert you to the presence of smoke, but only fire sprinklers actively control the flames, limit smoke, and protect residents, firefighters, and property.

If there's a fire, the sprinkler closest to the fire individually activates to the high heat, not smoke. It buys time — not only for residents to safely escape but also for firefighters to respond.

Make sure your building is protected with fire sprinklers.
